Munich-based e-mobility scale-up EcoG celebrated its five-year anniversary themed "EcoG High5"

EcoG, a Munich-based software company specializing in operating systems for electric vehicle (EV) DC chargers, recently celebrated its 5th anniversary. Over the past 5 years, EcoG has been empowering sustainable EV charging through its innovative software solutions for DC charging infrastructure.

The company's focus on developing operating systems for DC chargers has played a crucial role in advancing e-mobility and growing the EV charging industry. EcoG was founded by Joerg, Johannes, and Manuel with the vision of making a positive impact on the world through technology.

During the celebration, EcoG also held a High5 Talk where key players in the e-mobility industry, including Andreas from BayBG Venture Capital, Leah from ZeroMission, Inc., and Torsten from Infineon Technologies, shared their valuable insights with Veronika on the challenges and opportunities in the e-mobility space.

With the support of its team, investors, partners, and customers, EcoG is grateful for everyone who has made this milestone possible and looks forward to the next episode in its journey towards a more sustainable future.

About EcoG

EcoG is a global IP and technology company dedicated to the rapid expansion of sustainable charging infrastructure for electric vehicles. With its charge controllers, reference designs, and software, EcoG enables companies to bring products and services to market quickly and scale profitably. Having secured more than 15% market share in Europe by 2022, EcoG's products serve industry giants such as Siemens and one of the world's largest gas station equipment suppliers and demonstrate a strong presence in the Indian and North American markets. The company continues to grow in 2024, with commitments to invest $14.4 million via its North American headquarters in Detroit, Michigan.
